### Common Null Values

These values are to be used with each of the Utah Trauma Registry Data Elements described in this document which have been defined to accept the Null Values.

Utah Values	NTDS Values	Description
NA	1	Not Applicable
NOT	2	Not Known/Not Recorded

**Additional Information:** For any collection of data to be of value and reliable, a strong commitment must be made to ensure the correct documentation of incomplete data.

- **Not Applicable:** This null value code should be utilized if at the time of patient care documentation, the information requested did not apply to the case at hand. For example, variables documenting EMS care would be “Not Applicable” if a patient self-transport to the hospital.
- **Not Known/Not Recorded:** This null value applies if, at the time of patient care documentation, information was unknown to the patient, family, or health care provider **or** the information was not documented in the patient’s record. Use of this value documents that there was an attempt to obtain information but it was unknown by all parties involved at the time of documentation, or that the information was not supplied or documented in the patient’s record. For example, injury date and time may be documented in the hospital patient care report as “Unknown” or the patient arrived by ambulance; however, no EMS run sheet is in the patient record.
